

Mali Anurag H R

Bengaluru, India|8073269946|malianuraghr07@gmail.com | linkedin.com/in/mali-anurag-h-r|github.com/Malianurag07

PROFILE SUMMARY

Junior Python software engineer with experience in data analysis, machine learning, and web development, skilled in building and maintaining source-specific web-data integrations using Python, APIs, HTML, and JSON. Proficient in extracting structured information from APIs and HTML responses, with a strong foundation in Python fundamentals and problem-solving skills. Experienced in working with Git, GitHub, and collaborative development workflows.

SKILLS

Technical Skills: Python, Sql, Pandas, Numpy, Scikit Learn, Tensorflow, Flask, Django, Fundamentals. Basic Understanding, Problem Solving Skills. Attention, Personal University Internship, Verification. Clear Written, Requirements Good Python, Pull Request Workflows, Freelance Project, Strong Debugging, Familiarity Git, Spoken English, Fundamentals., Position, Initial

Tools & Platforms: Git, GitHub, Power BI, Excel, Arduino

Soft Skills: Strong analytical, problem-solving, communication, and teamwork abilities, with experience in working independently and collaboratively in remote environments

WORK EXPERIENCE

No direct work experience is listed, however, various projects and academic experiences have provided a strong foundation in software engineering and data analysis.

EDUCATION

Amrita Vishwa Vidyapeetham	2022 - 2026
Bengaluru, India	
B.Tech in Electronics and Communication Engineering	
DR Academy	Pre-University, State Board - 89%
Varin International Residential School	Secondary School, ICSE - 81.6%

PROJECTS

Netflix Content Analytics Dashboard

Python, SQL, Power BI

- Built an interactive Power BI dashboard analyzing Netflix movies and TV shows data across multiple countries and genres
- Created DAX measures for content growth analysis and ratings breakdown
- Used Power Query for data cleaning and SQL for data extraction to ensure accurate reporting and visualization

AWHA - Anomaly Detection in Industrial Control Systems

Python, Scikit-learn, LSTM

- Developed a machine learning system to detect anomalies in industrial IoT sensor data
- Built preprocessing pipelines for multivariate time-series data using Python
- Applied LSTM and Scikit-learn models to identify abnormal system behavior and improve operational monitoring efficiency

AI-Powered Agricultural Assistant Chatbot

TensorFlow, Flask

- Built a plant disease and nutrient deficiency classification system using TensorFlow
- Integrated a conversational interface using Flask for user interaction
- Implemented image processing and classification pipelines for agricultural use cases to assist in identifying crop issues

Driver Drowsiness Detection System

OpenCV, LSTM

- Developed a real-time monitoring system to detect driver fatigue using computer vision

- Implemented automated alert mechanisms using OpenCV and LSTM-based detection
- Designed the system for real-time video stream processing and alert generation to enhance road safety

Warehouse Automation Robotic Arm

YOLO, Arduino

- Developed an object detection and classification system using YOLO for warehouse automation
- Integrated hardware-software communication for automated sorting operations
- Programmed Arduino-based control systems for robotic arm movement and object handling
