

JEEVAN RAJ M

AI/ML Engineer & Agentic AI Enthusiast | Python, LLMs & Full-Stack ML Systems

+91 6362018391 | jeevanrajm2882004@gmail.com | Mysuru, Karnataka
linkedin.com/in/jeevan-raj-m-5ba64a383 | github.com/jeevanraj-28 | jeevanraj-28.github.io

PROFILE

Final-year B.E. student in Artificial Intelligence & Data Science (CGPA 9) with hands-on experience shipping GenAI systems, including a production-grade RAG knowledge assistant and a full-stack AI voice-agent platform. Skilled across the ML + backend stack — data preprocessing, feature engineering, model training, FastAPI microservices secured with OAuth2/JWT, asynchronous task processing (Celery), and containerized (Docker) deployment on AWS/Azure. Targeting Agentic AI engineering — LLMs, tools, and autonomous workflows — as a full-time role.

SKILLS

Programming: Python, SQL, TypeScript

GenAI / Agentic AI / LLMs: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), LangChain, Vector Databases, Prompt Engineering, LLM API integration, Gemini, OpenRouter

Full-Stack AI: Next.js, React, FastAPI, Flask, REST APIs, LiveKit, STT/TTS pipelines, OAuth2, JWT, RBAC

ML / DL Frameworks: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, OpenCV

Infra & DevOps: Docker, Git, AWS, Azure, Celery, CI/CD, Kubernetes, Redis

Data & Databases: SQL (Oracle/MySQL), PostgreSQL, SQLite, data preprocessing, feature engineering, Power BI, data analysis & visualisation

Core AI/ML: Machine Learning, Deep Learning, NLP, Computer Vision, Recommendation Systems, Model Evaluation & Metrics

EXPERIENCE

AI Development Intern — Kinetrix Technologies LLP

Oct 2025 – May 2026

- Contributed AI modules to CARE (Open Healthcare Network), an open-source healthcare platform — implemented a voice-to-text clinical 'Scribe' tool (Whisper, BERT) and a radiology image-analysis tool (YOLO, ResNet).
- Integrated both modules with the platform's Python/FastAPI backend, secured via OAuth2, JWT, and RBAC, and deployed on AWS/Azure.
- Worked with the platform's asynchronous background task processing (Celery) for handling AI inference workloads without blocking core services.
- Ensured interoperability with EHR systems via HL7 FHIR and DICOM standards for structured clinical data preprocessing.

Data Science & ML Intern — Infotact Solutions (Virtual)

Sep 2025 – Nov 2025

- Worked on complete ML workflows — data collection, cleaning, feature engineering, model training, and evaluation — using Python, Scikit-learn, Pandas, and NumPy.
- Analysed real-world datasets and applied supervised learning algorithms to generate data-driven outcomes.

PROJECTS

Customer Outreach OS — AI-Powered Customer Outreach & Voice Agent

2026

Next.js · TypeScript · React · SQLite · Gemini · OpenRouter · LiveKit | github.com/jeevanraj-28/project-echo

- Built a full-stack AI customer outreach platform using Next.js, TypeScript, SQLite, Gemini/OpenRouter, and LiveKit, supporting campaigns, customer CSV ingestion, knowledge bases, and AI conversations.
- Developed a grounded conversation engine with campaign-scoped knowledge retrieval, customer memory, provider abstraction, response validation, and safeguards against unsupported AI-generated claims.
- Implemented a realtime voice-agent pipeline with LiveKit, STT/TTS, interruption handling, echo protection, and latency instrumentation for natural multi-turn customer conversations.

RAG-Based Knowledge Assistant

2026

Python · LangChain · Vector Database · LLM APIs | github.com/jeevanraj-28/lumina-rag-assistant

- Built a Retrieval-Augmented Generation pipeline using LangChain to answer queries over a custom document set — covering embeddings, vector search, and LLM-based response generation.

AI-Integrated Healthcare Platform (CARE / Open Healthcare Network — Open Source)

2025 – 26

Python (FastAPI) · TensorFlow · Whisper · BERT · YOLO · ResNet · Docker · AWS/Azure

- Built and integrated a voice-transcription 'Scribe' tool (Whisper, BERT) converting clinical dictations into structured medical reports.
- Built a radiology image-analysis tool (YOLO, ResNet) to flag anomalies in X-rays, CT scans, and MRIs.
- Integrated both with the platform's FastAPI backend (OAuth2/JWT/RBAC-secured); containerized with Docker for AWS/Azure deployment.

Disaster Segmentation — Satellite Image Analysis

2025

Python · PyTorch · OpenCV · NumPy | github.com/jeevanraj-28/Disaster-segmentation

- Trained a deep learning model for pixel-level semantic segmentation of disaster-affected areas in satellite/aerial imagery to assist emergency responders in rapid damage assessment.

EDUCATION

B.E. — Artificial Intelligence & Data Science, Mysore University School of Engineering

July 2022 – July 2026

CGPA 9. Coursework: ML, Deep Learning, Computer Vision, NLP, DBMS, Data Structures & Algorithms.

Advanced Diploma in Computer Programming (ADMCP) — AIMIT Institute, Mysore

2024 – 2026
